Enhancement incentive system using ~~transaction events for rewards~~ on a distributed network.

It is claimed:

(currently amended) 1. A system using ~~transaction~~ events to generate ~~user incentives~~:

a ~~host~~ computer for transmitting a ~~user~~ identification profile:

a server computer ~~under the control of software components, wherein the components comprise:~~

a ~~transaction event module~~ for generating points based upon a ~~transaction event~~.

a ~~Point Exchange Module for~~ exchanging points;

~~wherein the server computer~~ updates the identification profile based upon the ~~transaction event~~ or point conversion.

(Currently amended) 2. The system of claim 1, ~~wherein the software components of the server computer further comprise, a Point Conversion Module for~~ converting points to units.

(Currently amended) ~~3. The system of claim 1, wherein the Point Exchange Module~~ exchanges points for a "value" selected from the group consisting of equity, cash, product and services.

(Currently amended) ~~4. The system of claim 1, wherein the Point Exchange Module further comprises a Point Auction Module~~ for selling or purchasing points.

(Currently amended) ~~5.~~ The system of claim 1, ~~further comprises a Work Shift Module wherein~~ the work shift is ~~an employee transaction event~~.

(Currently amended) ~~6. The system of claim 1, further comprises a Work Shift Exchange Module wherein~~ the employee exchanges work shifts.

(Canceled) 7. The system of claim 6, further comprises a Scheduler wherein the Scheduler identifies employee work shift availability.

(Currently amended) ~~8. The system of claim 6, further comprises a Schedule Auction Module wherein the~~ employees can exchange work shifts wherein each work shift exchange represents a ~~certain~~ point value.

(Currently amended) ~~9.~~ The system of claim 1, ~~wherein the~~ database ~~further comprises three databases the Employee File Manager, Customer File Manager and the Tabulator for~~ employees, ~~customers and point data storage.~~

3

(Cancel) 10. The system in Claim 1, comprises an Identification Profile (ID) wherein the ID is based upon a subscription agreement.

Enhancement incentive system using an _employee action_ generating an _improved wage_ on a distributed network.

1. A system using an _employee action_ to generate an earning, comprising:

    a.  _plurality of client computers connected to a network_, upon which an _employee_ identification profile is entered and transmitted to a server computer;

    b.  a server computer connected to the network, _which performs the steps of_:

        _receiving the employee_ identification profile;

        generating points based upon _an employee action_;

        exchanging points between _employees_; and

        updating the _employee_ identification profile _based upon the action_, earning or point conversion

2. The system of claim 1, _which performs the steps further_:

        Converting points to employee units where each unit has value and the employee selects from the group of equity, cash, product and services;

        Selling or purchasing points.

3. The system of claim 1, _which performs the steps further_:

        a work shift _has a point value_;

exchanging work shifts <u>having point value,</u> which the employee can offer

points in exchange.

4. The system of claim 1, <u>which performs the steps further</u>:

    <u>customer identification profile</u>;

    (New)<u> providing employee assignment of customers</u>;

    (New) <u>recording customer preference, request and frequency</u>;

    <u>stores the assignment, action, request, frequency in a database.</u>
